

Disclaimer and Waiver Form

Ultra Low Volume (ULV) fogging to apply disinfectants in commercial or residential spaces. ULV fogging is an adjunct to, and not a replacement for, manual cleaning with appropriate detergent. According to most product formulators, personal protective equipment (PPE) is required for ULV fogging, and unprotected occupants should leave spaces during wet fogging, and for up to 2 hours following application. During the fogging process micro-droplets are dispersed in air and can remain there for several hours, which is why safety instructions from formulators must be followed closely. Botanical disinfectants may require less evacuation time, due to their low toxicity. Never stay in your home or office during any fogging or misting application.

Please note disinfecting services do not prevent person-to-person transmission or reintroduction of microorganisms to a facility. We recommend that you and your employees remain attentive and follow CDC Guidelines for reducing transmission in the workplace. Client hereby fully releases and discharge [DisinfectingWorks.com](https://www.DisinfectingWorks.com) for any and all claims implied or express in the future arising out of novel coronavirus or other similar viruses or spread in its facilities.

If you read the above and accept the disclaimer and waiver form, please sign:
